

# Branch: Business Administration

**Code:** PROMAN

**Option:** Project management

**Level:** Master

**Prerequisites:**

**Opportunities:**

IT PROJECT MANAGER

IT project managers plan, organize and control IT projects. They coordinate all employees, departments and external service providers involved. In doing so, they always keep an eye on the schedule and the budget. In addition to the correct implementation of projects, they are also responsible for the achievement of objectives.

PROJECT MANAGER / E-COMMERCE

Thanks to their market knowledge and technical know-how, an e-commerce project manager adapts their company's website to the needs of the customer and their buying behavior, and also looks specifically at the range of products on offer. The main responsibility is therefore the constant development and creation of added value for the customer. Technical know-how, market knowledge and commercial experience are indispensable in this profession. RESEARCH

PROJECT MANAGER

As a project manager in the field of research and development, it is a great challenge to strategically guide the direction of research and to invest in the research effort in a meaningful way. Research teams have to constantly expose themselves to new situations, as the requirements for project results only emerge

during the course of the research project and cannot be specified precisely from the beginning. You therefore have to deal with a high degree of technical complexity, sometimes unclear requirements, and flexible target definitions.

**Description:**

The UUT Master of Business Controlling program builds on your existing knowledge and makes you a sought-after specialist in business strategy. Your expertise in the areas of management consulting, requirements management and change management will make you a key figure on your company's road to success.

**Specific competences:**

From planning to implementation - the path is as important to you as the goal. You have the big picture. With your Master's degree in Project Management at UUT, you will make your coordination skills your life's work and start at management level.

**Quality and competences:**

During your studies, you will carry out various projects yourself, from planning and implementation to evaluation, thus broadening your theoretical knowledge through extensive practical experience. Whether it's change management, online project simulation or business project planning, you determine the focus entirely according to your personal preferences.
