

# Branch: Business Administration

**Code:** LOGIST

**Option:** Logistics

**Level:** Master

**Prerequisites:**

**Opportunities:**

LEAD LOGISTICS PROVIDER/IN

As a Lead Logistic Provider (LLP) you develop innovative and value-added supply chain concepts for the various players in a supply chain, based on a comprehensive analysis of the customer's needs. In addition, you are responsible for the planning, control and continuous improvement of the planned LLP services.

SUPPLY CHAIN OPERATIONS MANAGER/EN

As a Supply Chain Operations Manager, you are responsible for planning, controlling and optimizing the business-to-business value creation processes and systems. Your tasks include, for example, the transparent preparation of important performance and service indicators to assess the quality of business-to-business cooperation. In addition, you act as an interface between management, employees, customers, suppliers and partners. SUPPLY CHAIN EXCELLENCE

MANAGER/INDUSTRY

As a Supply Chain Excellence Manager, you are responsible for cross-company supply chain projects within international project teams. In your leadership role, you ensure the consistent alignment of cooperation on flexibility, robustness, sustainability and profitability of supply chains.

**Description:**

Your Master of Supply Chain Management program trains you to become a specialist in the successful planning, control and optimization of business-to-business value creation processes. And you will do so on both a professional and practical level. You will address topics such as sustainability, innovation and competitiveness in the context of global network relations in a comprehensive manner and place them in the context of digitalization, climate protection and security of supply.

**Specific competences:**

Everything is in motion. And as efficiently as possible. These are the themes of your Master of Supply Chain Management. If you have already gained some professional experience and now want to take the next step in an attractive professional field, this challenging degree program will certainly take you further. As a future expert, you will be able to recognize the complexity of global trade along the value chain and manage it accordingly. At the same time, you will optimize processes and design supply chains that are as green and social as possible - for a better global footprint.

**Quality and competences:**

At the same time, you will acquire the necessary leadership, methodological and action skills for a later management position. In addition, you will deal with customer-oriented customization, just-in-time deliveries, IT security and data protection. A lot of relevant knowledge that is valuable for your future employers. And therefore also promises maximum added value for you.
