

Faculty :CIVIL ENGINEERING

Acronym: INSSAN

Option:HEALTH FACILITY

Level: BTS

Prerequisites: Scientific series or equivalent level

Opportunities:

- Designer in sanitary installation;
- Service Agent ;
- Commissioning technician;
- Design office technician;
- Plumber.

Description

This specialty aims to train senior technicians operating in two specific areas: sanitation and management of the water chain

(collection, pipes, storage, disinfection, etc. construction of latrines).

SOUGHT-AFTER SKILLS

Generic skills

- Implementation of different measurement, positioning, data entry and layout equipment.

specific skills :

- Design the installation's preliminary design by establishing an estimate and participating in the dialogue with the customer;
- Study the specifications by carrying out the execution calculations and choosing the materials;
- Build infrastructure and all supply systems: drilling techniques, digging wells, tracing and setting up drinking water or irrigation networks;
- Create drainage systems, install latrines and sewers;
- Perform tests on installed equipment and put it in working order;
- Carry out restoration work (repair of faucets, resolution of water leakage problems, replacement of devices, etc.) linked to normal wear and tear or obsolescence of the installations.
